Your technical staff has to cope with multiple challenges when it comes to deploy websites, sometimes on very short notice. The efficiency level of your SSL partner, both to reduce the issuing time and to ease the audit and administrative processes is then crucial: it has a direct impact on your overall performance and may well condition your business model. TBS internet, a certificate broker with SSL expertise, sets you free from those constraints and helps you focus on your core business!

HISTORY

Founded in France in 1996, TBS Internet launched the SSL certificate aggregator business in order to best serve customers. 15 years later, we are providing certification solutions and offering the largest product range on the market, embracing technology and audit changes.

Witness of many turning points of the online security, we have always been the first to promote new products such as EV, SHA256, 2048-bit root certificates or Trust Seals. We understand the value of trust in online B2B and B2C relationships.

CORPORATE VALUES

TBS Internet was built on a strong desire to increase public awareness on online security matters. Ever since we've been providing online trust through efficient, available and localized services. Day after day, as great people, we are proud to maintain transparency and discretion.

ASSETS

A wise knowledge of the technology

 The emergence and the development of e-commerce comes with new threats. With 15 years hands-on experience and a detailed technology understanding, we thrive to provide the product which fits each customer's need, plus the security knowledge that should come with it. Aware of the risks, we do not sell low-authentication certificates such as domain-validated which give a false impression of security, increasing the risks of phishing.

Our in-house tech support, and the 500+ pages technical documentation maintain reflects the level of care we provide to get your services up and running in the minimal time.

To best suit all needs, we setup our own digital certificate brand TBS X509 in 2006 which provides a full range of affordable products with no security compromise.

MISSION STATEMENT

Be the top European high-authentication digital certificate aggregator, putting service first. Provide outstanding service with tech-savvy sales advisors and internal technical support. To achieve that, we maintain top-level partnerships with all Certification Authorities.

RANGE OF PRODUCTS

- Server certificates: single-site, Multi-sites (SAN), Wildcard, EV, with or without SGC
- Developer certificates: Microsoft Authenticode, Sun Java, Adobe Air
- User certificates: secure email and authentication, PDF signing, document signing
- Trust marks: VeriSign Trust Seal
- Outsourced PKI, Enterprise Root chaining and White labelling

A multi-brand platform

 Entirely designed by our team, the TBS-Certificates platform is the most advanced management tool on the market. From one place, manage all your certificates, from all brands and all types, and tailor the web site to your needs.

With multiple-user & right management, and finance vs production split, you may focus on your own business and let us manage all your digital certificates. Available to both IT companies and Entreprises, our interface also comes with an API to integrate smoothly in your own systems.

A devoted team

 Since 1996, whether they are from public listed companies or SMEs, our customers trust our services and appreciate our selected range of products in complete adequacy to their PR plan and their high grade security standards.

A dedicated advisor knows your technical, accounting or working constraints. He manages your account and guides you during every step of your certification request. That relationship, based on proximity and trust, makes our services outstanding.

MAJOR PARTNERS

We maintain platinum level partnership with these Certification Authorities:
